DIBBLE DANCE POP-UP FILMING TIPS

This project has been designed for you to have fun without a lot of fuss! Below are a few tips for filming, should you find them helpful:

- Find a location that is well-lit with natural light, indoors or out.
- If indoors, put the camera with its back to a window. The dancer should face the light; sidelight is nice too. Avoid overhead lights.
- Avoid clothing with logos and / or text; solid bright colors are great!
- Know the edges of your frame. You will want to fill the frame with your movement as much as possible without cropping arms or legs.
- Set your laptop, phone, or camera on a tripod or steady surface.
- Shoot horizontally (landscape mode).
- Do a quick test video and then maybe make some spike marks on the floor so you know what area to stay in.
- If using a smartphone, your camera’s default setting should be ok!*

* For the techies: Ideal settings are 1080p at 30fps, 1080p at 60fps, or 1080p at 24fps. 720p and 4k are also fine. On Android phones, the settings are usually in the main camera app behind the gear settings wheel. On iPhones, the camera settings are in the main settings icon in the photos and camera section.
